Research Area

To enhance the human ability to read and understand big data, I developed novel graphical representations that enable a more effective and smoother analysis using machines. Building upon the techniques from **Data Visualization** and **Human-Computer Interaction**, my work focuses on developing human-centered computing tools to address complex scientific problems, facilitating the process of explainability and data-driven decision-making. Our authoring tools and designs are appreciated and used by data enthusiasts, developers, and practitioners from different domains.
